

# CSS Contact Form Exercise

Download the exercise zip package.

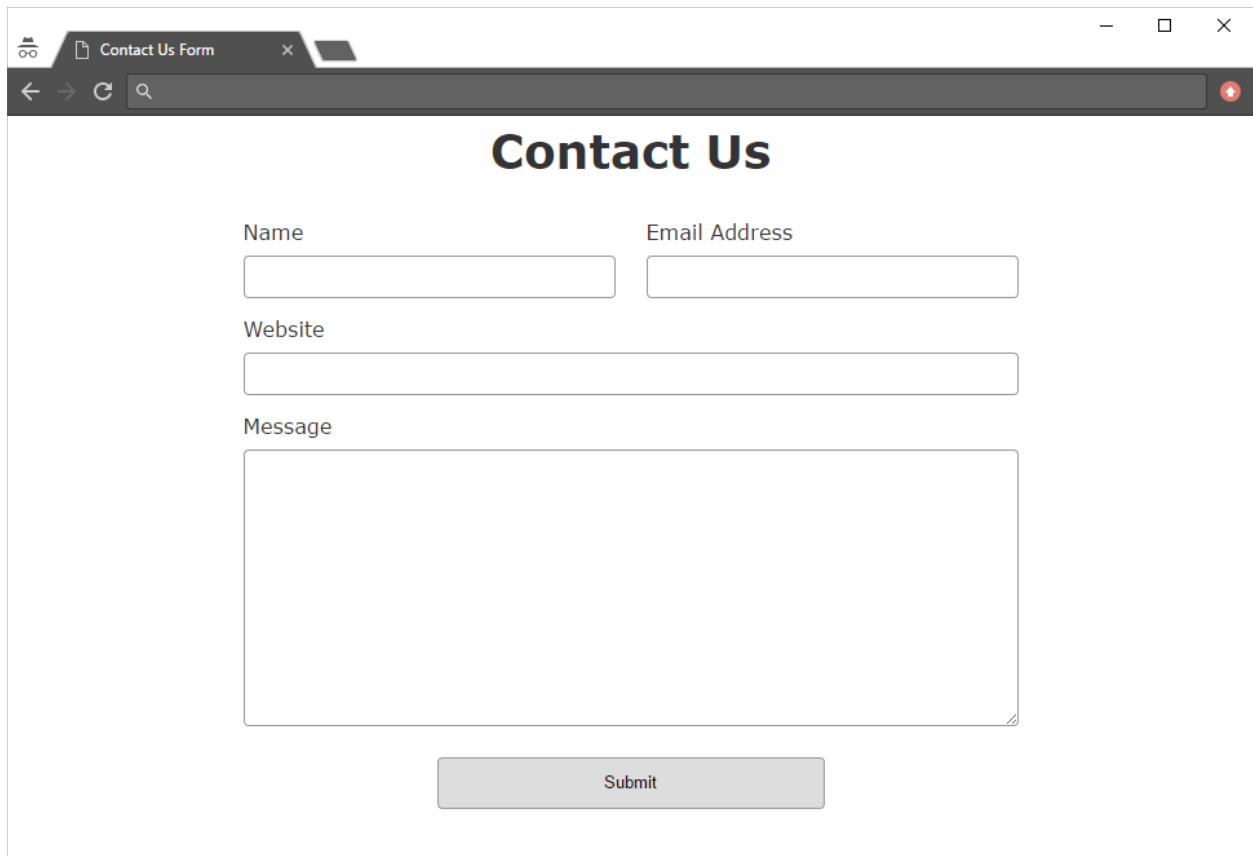

In the starting project you have been given, create the required HTML and CSS declarations in the appropriate files to complete the exercise. Use the provided PSD as a guide.

## Build

Your final page should be contained within the 960px center page layout.

Using your knowledge of floats, display modes, and the box model, you will create a generic contact form. Space the form components 12px apart (24px prior to the submit button) and ensure there is 24px of space between the first and second components. Don't worry about getting this pixel-perfect, the aim is to understand how to style form elements.

Your completed file should look similar to the following image:

The image shows a web browser window with a single tab titled "Contact Us Form". The address bar is empty. The main content of the page is a contact form with the title "Contact Us" in a large, bold, black font. Below the title, there are four form elements: a "Name" label above a text input field, an "Email Address" label above a text input field, a "Website" label above a text input field, and a "Message" label above a large text area. At the bottom of the form is a "Submit" button. The form is centered on the page and has a clean, minimalist design with a white background and light gray borders for the input fields.
